

Using Aggregates and Combining Data Sources in OBIEE

Žiga Vaupot
Senior Consultant

Rovinj, 14.10.2015

About Qubix

About me

- 20+ Years in IT
- 10 years working for Oracle, 4 years CIO
- MSc. in Economy, BSc. in IT
- Senior Consultant for Business Intelligence solutions
- Major work area today is Business Intelligence, currently investigating BI Cloud Services, and focusing in Data Science and Machine Learning

Qubix @ HROUG 2015

Aggregate Fact Tables or Cubes

- *Aggregate fact tables* are simple numeric rollups of atomic fact table data built solely to accelerate query performance. These aggregate fact tables should be available to the BI layer at the same time as the atomic fact tables so that **BI tools smoothly choose the appropriate aggregate level at query time**. This process, known as *aggregate navigation*, must be *open* so that every report writer, query tool, and BI application harvests the same performance benefits. A properly designed set of aggregates should behave like database indexes, which accelerate query performance but are not encountered directly by the BI applications or business users. **Aggregate fact tables contain foreign keys to shrunken conformed dimensions, as well as aggregated facts created by summing measures from more atomic fact tables.** Finally, **aggregate OLAP cubes with summarized measures are frequently built in the same way as relational aggregates**, but the OLAP cubes are meant to be accessed directly by the business users.

- ... live demo between the lines

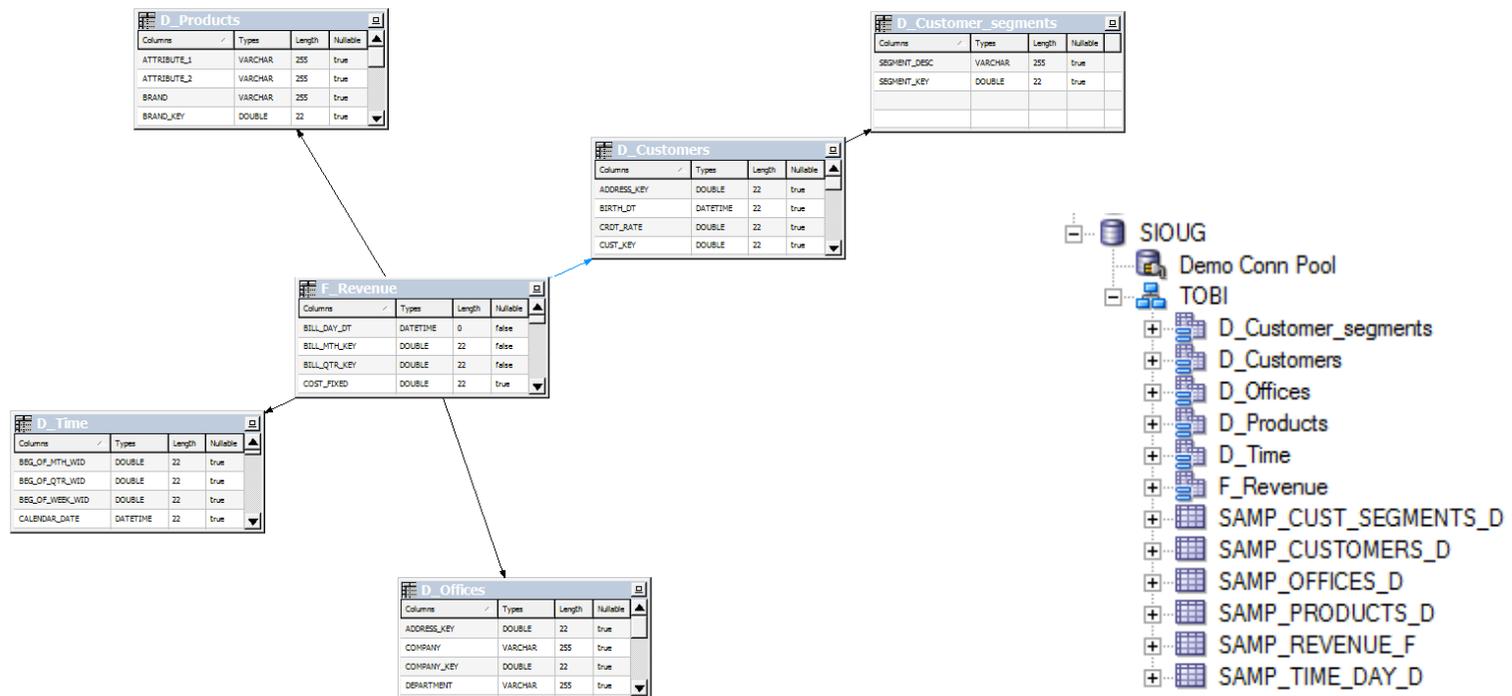

Agenda

- Aggregates in OBIEE
- Simplify Aggregates Management with Aggregate Persistence Wizard
- Vertical Federation – Drill from Multi-Dimensional to Relational
- ... live demo between the lines

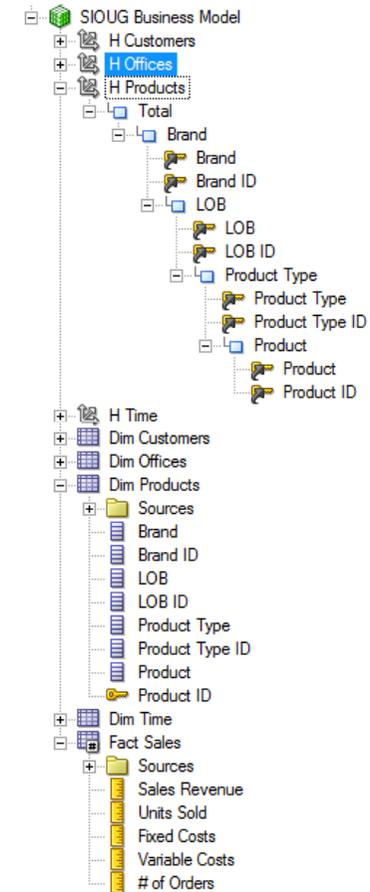

Data schema to start with

Let's check RPD as well – Physical Layer

Business Model

Let's now create a simple query

Selected Columns

Double click on column names in the Subject Areas pane to add them to the analysis. Once added, drag-and-drop columns to reorder

| Customers | Offices | Products | Time | Sales |
|------------------|------------|----------|------|---------------|
| Customer Segment | Department | Brand | Year | Sales Revenue |
| | | | | Units Sold |

Filters

Add filters to the analysis criteria by clicking on Filter option for the specific column in the Selected Columns pane, or by clicking on the

simple table

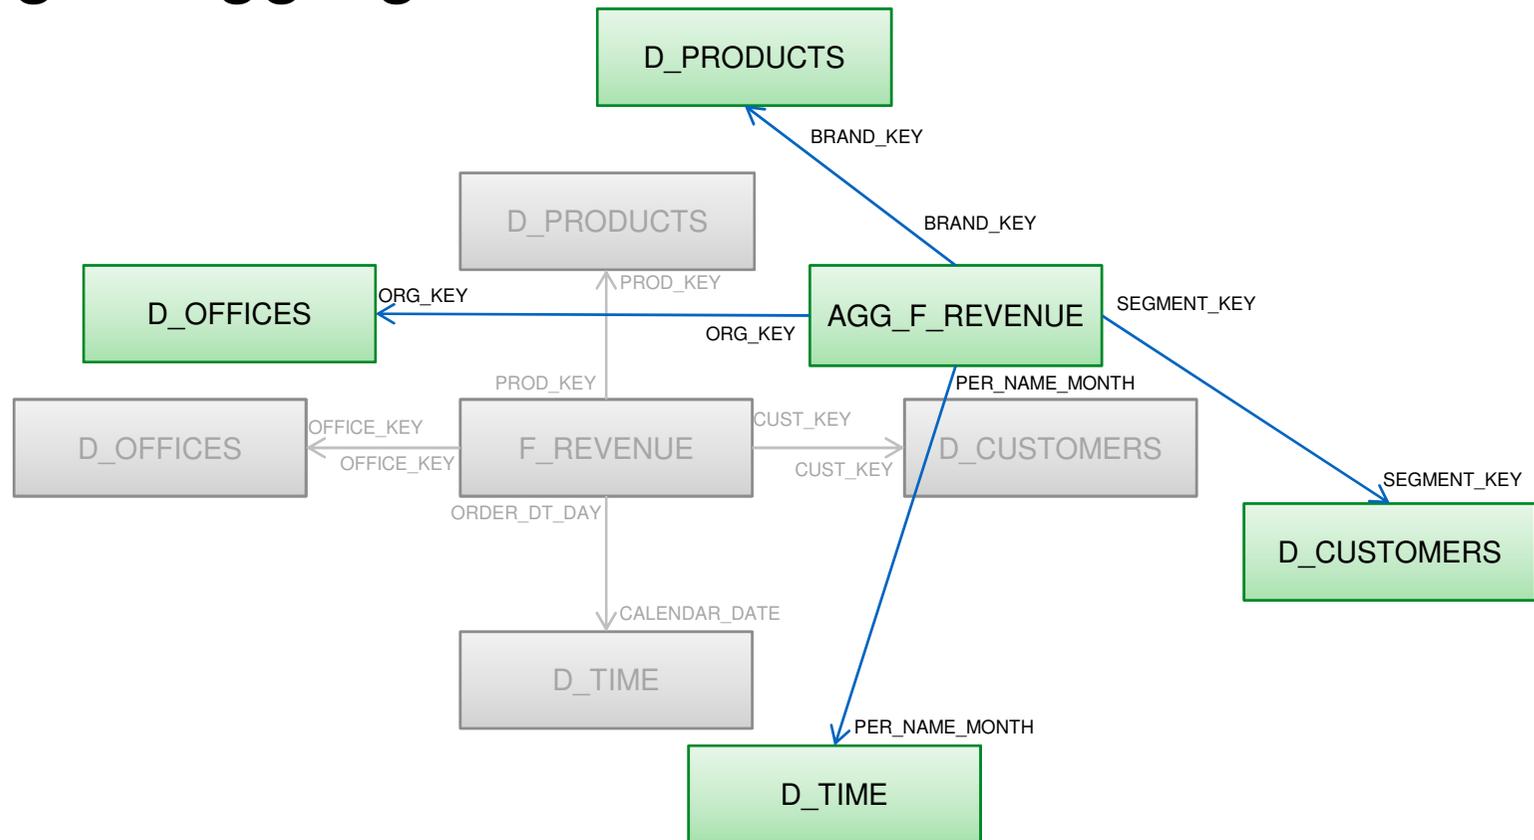

| Customer Segment | Department | Brand | Year | Sales Revenue | Units Sold | |
|---------------------|-----------------|---------|---------|---------------|------------|--------|
| Active Singles | Assembled Dept. | BizTech | 2009 | 804 | 85 | |
| | | | 2010 | 86,960 | 8,103 | |
| | | | 2011 | 93,069 | 7,666 | |
| | | | 2012 | 83,620 | 7,084 | |
| | FunPod | BizTech | 2009 | 1,166 | 90 | |
| | | | 2010 | 79,244 | 6,063 | |
| | | | 2011 | 91,051 | 6,388 | |
| | | | 2012 | 120,130 | 8,827 | |
| | HomeView | BizTech | 2009 | 822 | 99 | |
| | | | 2010 | 89,128 | 8,284 | |

Bring Base and AGG tables together

The screenshot shows the Oracle BI Enterprise Edition interface. On the left, the 'Logical Table Sources' tree is expanded to 'SOURCES' > 'D_Customers', where 'D_Customers_AGG' is circled in red. A red arrow points from this source to the 'Derived from physical mappings' table at the bottom. The table shows the mapping for 'D_Customers_AGG' to the 'SEGMENT_KEY' column of the 'D_Customers_SEGMENTS' table in the 'SIOUG' schema.

| Logical Table Source | Mapped as |
|----------------------|---|
| D_Customers | "SIOUG"."SIOUG"."D_Customer_segments"."SEGMENT_KEY" |
| D_Customers_AGG | "SIOUG"."SIOUG"."D_Customers_AGG"."SEGMENT_KEY" |

Logical Table Source - F_Revenue_AGG

New objects in business model of RPD

The screenshot displays two RPD objects and their configuration windows:

- Dim Time Object:**
 - Sources: D_Time, D_Time_AGG, SIOUG__SIOUG_SA_Year000015F6
 - Year, Half Year, Quarter, Month, Week, Date
- Fact Sales Object:**
 - Sources: F_Revenue, F_Revenue_AGG, SIOUG__SIOUG_ag_Fact_Sales
 - Sales Revenue, Units Sold, Fixed Costs, Variable Costs, # of Orders

Configuration windows for the aggregation content:

Dim Time Configuration:

Aggregation content, group by: Logical Level

| Logical Dimension | Logical Level | |
|-------------------|---------------|---|
| H Time | Year | X |

Fact Sales Configuration:

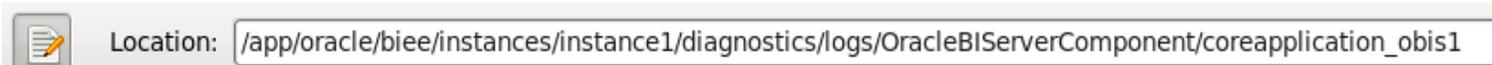

Aggregation content, group by: Logical Level

Show mapped Show unmapped

| Logical Dimension | Logical Level | |
|-------------------|------------------|---|
| H Products | Brand | X |
| H Offices | Company | X |
| H Customers | Customer Segment | X |
| H Time | Year | X |

Ok. Everything what is needed is created. But what about refreshing data?

- Navigate to log folder

- Search for “BEGIN: Create Aggregates”

```
[2015-09-30T05:26:04.000-04:00] [OracleBIServerComponent] [TRACE:5] [USER-40] [] [ecid: 0058FE53RugFw000jzwno0002KR00001n,0] [tid: 70497700]
[requestid: fffe0002] [sessionid: fffe0000] [username: weblogic] ----- Aggregate Manager: *****BEGIN: Create Aggregates***** |[[
```

- Find log entry where data is appended to fact table
ag_Fact_Sales ...

```
SET VARIABLE DISABLE_CACHE_HIT=1, DISABLE_CACHE_SEED=1, DISABLE_SUMMARY_STATS_LOGGING=1, INACTIVE_SCHEMAS='': populate "ag_Fact_Sales" mode ( create
table connection pool "SIOUG"."Demo Conn Pool") as select_business_model "SIOUG Business Model PAW"."Dim Customers"."Customer Segment ID" as
"Customer_S000015B4", "SIOUG Business Model PAW"."Dim Offices"."Company ID" as "Company_ID000015B7", "SIOUG Business Model PAW"."Dim Products"."Brand
ID" as "Brand_ID000015C0", "SIOUG Business Model PAW"."Dim Time"."Year" as "Year000015C8", "SIOUG Business Model PAW"."Fact Sales"."Sales Revenue" as
"Sales_Reve000015CF", "SIOUG Business Model PAW"."Fact Sales"."Units Sold" as "Units_Sold000015D0", "SIOUG Business Model PAW"."Fact Sales"."Fixed
Costs" as "Fixed_Cost000015D1", "SIOUG Business Model PAW"."Fact Sales"."Variable Costs" as "Variable_C000015D2", "SIOUG Business Model PAW"."Fact
Sales"."# of Orders" as "Z_of_Order000015D3" from "SIOUG Business Model PAW";
```

If you take that part of log and modify it a bit, then you can use it in ETL process

```
SET VARIABLE DISABLE_CACHE_HIT=1, DISABLE_CACHE_SEED=1, DISABLE_SUMMARY_STATS_LOGGING=1,
INACTIVE_SCHEMAS='': populate "ag_Fact_Sales" mode ( append table connection pool "SIOUG"."Demo
Conn Pool") as select_business_model "SIOUG Business Model PAW"."Dim Customers"."Customer Segment
ID" as "Customer_S000015B4", "SIOUG Business Model PAW"."Dim Offices"."Company ID" as
"Company_ID000015B7", "SIOUG Business Model PAW"."Dim Products"."Brand ID" as
"Brand_ID000015C0", "SIOUG Business Model PAW"."Dim Time"."Year" as "Year000015C8", "SIOUG Business
Model PAW"."Fact Sales"."Sales Revenue" as "Sales_Reve000015CF", "SIOUG Business Model PAW"."Fact
Sales"."Units Sold" as "Units_Sold000015D0", "SIOUG Business Model PAW"."Fact Sales"."Fixed Costs"
as "Fixed_Cost000015D1", "SIOUG Business Model PAW"."Fact Sales"."Variable Costs" as
"Variable_C000015D2", "SIOUG Business Model PAW"."Fact Sales"."# of Orders" as "Z_of_Order000015D3"
from "SIOUG Business Model PAW"
Where "SIOUG Business Model PAW"."Dim Time"."Year" = '2015';
```

- This is just example which you need of course adopt to your requirements, but that's the idea how you could setup incremental refresh.
- Of course, you would need to use some scheduler etc., but guess what,

Let's test again

Selected Columns

Double click on column names in the Subject Areas pane to add them to the analysis. Once added, drag-and-drop columns to the table.

| | | | | | |
|------------------|-------------|--------------|----------|---------------|------------|

Agenda

- Aggregates in OBIEE
- Simplify Aggregates Management with Aggregate Persistence Wizard
- Vertical Federation – Drill from Multi-Dimensional to Relational
- ... live demo between the lines

First findings

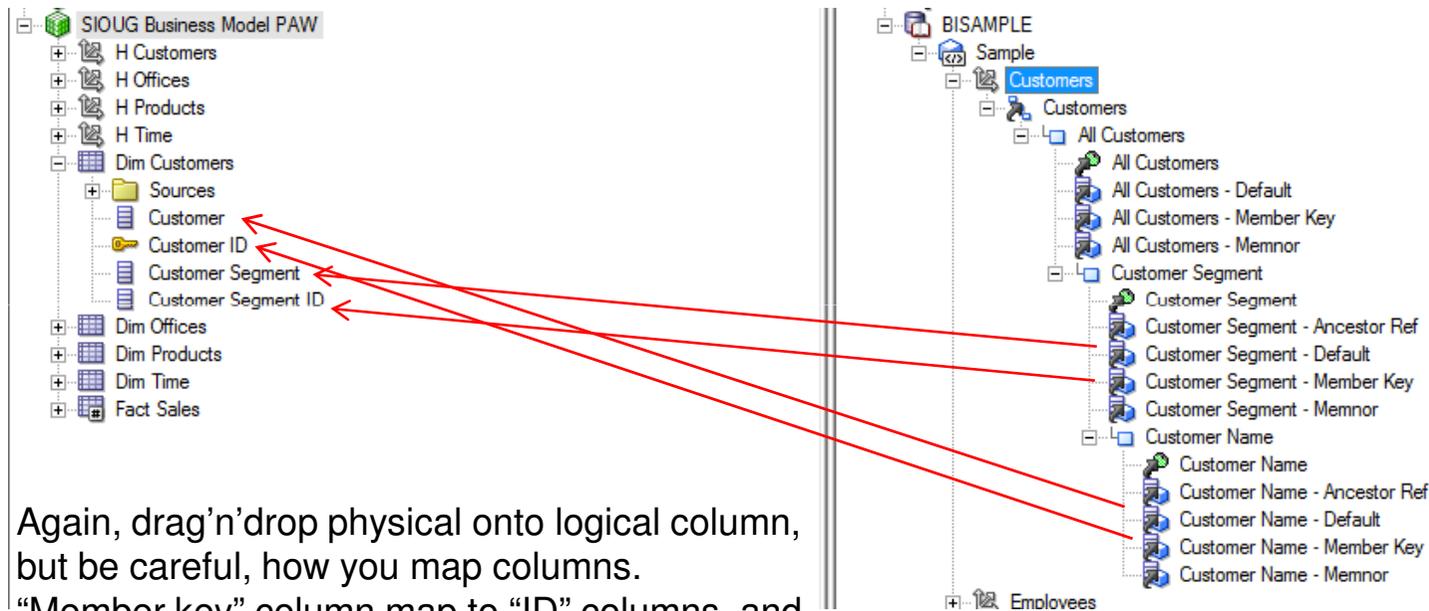

- The way how you bring Essbase into RPD is a bit different than in case of relational database
- Once you import it you could “almost instantly” start using it!
- When combining Essbase with other data sources, you should treat it as any other data source, like aggregates for example.
- The bottom line: Essbase is just another database!

And since it is just another database you can simply include it into your business model

Repeat this for all dimensions ...

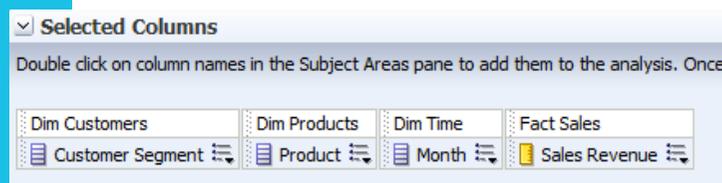

... for example for Dim Customers dimension

Again, drag'n'drop physical onto logical column, but be careful, how you map columns.

“Member key” column map to “ID” columns, and “Default” columns map to “description” columns in Business Model. You should also pay attention to the hierarchy in physical cube.

And let's test again

| Customer Segment | Product | Month | Sales Revenue |
|------------------|----------------------------|-----------|---------------|
| Active Singles | 7 Megapixel Digital Camera | 2010 / 01 | 9,771 |
| | | 2010 / 02 | 13,873 |
| | | 2010 / 03 | 12,431 |
| | | 2010 / 04 | 15,915 |
| | | 2010 / 05 | 28,330 |
| | | 2010 / 06 | 32,043 |
| | | 2010 / 07 | 35,338 |
| | | 2010 / 08 | 26,555 |
| | | 2010 / 09 | 21,508 |
| | | 2010 / 10 | 28,249 |
| | | 2010 / 11 | 14,877 |

Well, no surprises there. Right?

Leading Innovation in Business Analytics

The image features a central graphic consisting of several concentric circles. The innermost circle is a dark, almost black blue. This is surrounded by a ring of bright red, followed by a ring of a slightly darker red, and then a final ring of a very dark red. The entire graphic is set against a solid dark red background. Overlaid on this graphic is the text "That's all Folks!" written in a white, elegant cursive script. The text is positioned diagonally across the center of the circles, starting from the lower left and ending at the upper right.

That's all Folks!
